

U-TECK has developed the Vent-Tent, a portable shelter with more safety features than any other manufacturer currently has available in today's market

## VENT TENT

### Features:

- Quick and easy set-up
- Many safety features
- Lightweight & compact
- Full circulation
- Non-corrosive hardware
- Reflective sides
- No preshrinking
- Will not mildew
- 10" Blower Port in back

#### SPECIFICATIONS - 6' x 6' FOOTPRINT

The Vent-Tent is specially designed to safeguard the craft person from fatal carbon monoxide build-up. The standard features that U-TECK installed allow air to be fully circulated by the following methods:

U-TECK has also installed a "sock" in the back of the Vent-Tent to allow for a ventilator hose, blower, or heater-blower combination to be hooked up.

In addition to carbon monoxide protection, the Vent-Tent, with its roll-up bottom and side windows, is excellent on hot, rainy day

Three of the sides have a lower-level vent, which allows for up to 18 inches of opening for air circulation at ground level. Two of the sides have a window, which may also be opened for upper-level air circulation.

The combination of open lower-level vents and open windows allows for cross-ventilation, which eliminates the possibility of fatal carbon monoxide build-up.
